5 websites for SQL, Python and Data Analytics practice

SQL aur Python ke tutorials dekh liye? Ab actual practice kahan karoge?

Choose one skill, solve problems consistently, review mistakes and gradually increase difficulty. These platforms cover beginner exercises, interview questions, projects and guided learning.

Inside this guide:

- 01 StrataScratch for real interview practice
- 02 DataLemur for SQL and data interviews
- 03 Kaggle Learn for practical no-cost courses
- 04 SQLBolt for beginner SQL exercises
- 05 DataCamp + 30-day practice plan

Comment "PRACTICE" to get all links and more platforms.

1. StrataScratch + DataLemur

Use interview-style platforms after learning core syntax. Do not chase question counts. Focus on understanding the business question, writing a clear approach and reviewing alternative solutions.

StrataScratch

[Open StrataScratch](#)

The platform lists SQL, Python, statistics and other interview questions, mock interviews, portfolio projects, cloud notebooks, learning paths and performance insights.

Practice mode	Suggested evidence
SQL / Python questions	Save your own explanation, edge cases and improved solution.
Mock interviews	Note communication gaps alongside technical gaps.
Data projects	Publish the business problem, notebook, insights and recommendations.
Learning paths	Complete topics in sequence instead of random jumping.

DataLemur

[Open DataLemur](#)

DataLemur provides SQL and data interview questions across SQL, probability, statistics, machine learning and Python, with company-labelled examples.

Best for

Interview-style SQL practice and gradual movement from easy to medium and hard questions.

Practice journal

For every miss, record the concept, error, corrected query and one similar question.

2. Kaggle Learn + SQLBolt

These resources work well for building foundations through practical, browser-based learning before moving to interview-style platforms.

Kaggle Learn

[Open Kaggle Learn](#)

Kaggle lists no-cost courses including Python, Pandas, Data Visualisation, Intro to SQL, Advanced SQL, Data Cleaning and other practical data topics.

Course direction	Mini output
Python + Pandas	Clean and summarise one dataset in a notebook.
Data Visualisation	Build four charts and explain why each was chosen.
Intro / Advanced SQL	Answer business questions and document query logic.
Data Cleaning	Create a before-versus-after quality checklist.

SQLBolt

[Open SQLBolt](#)

SQLBolt describes interactive SQL lessons and exercises designed to help learners study SQL directly in the browser.

Start here if

You are new to relational tables, SELECT, filtering, sorting, aggregates and JOINS.

Learning rule

Change the sample query after each lesson and predict the result before running it.

3. DataCamp + Skill Progression

DataCamp offers guided, interactive learning across a broad analytics stack. Use it as a structured path, while checking the current access terms for the specific course or feature you choose.

DataCamp

[Open DataCamp](#)

DataCamp describes interactive courses, projects and practice exercises in Python, Excel, SQL, Tableau, Power BI and other data skills, with browser-based exercises and real-time feedback.

Recommended progression

Level	Practice target
Foundation	Complete guided lessons and repeat exercises without hints.
Application	Apply the skill to a different dataset or business question.
Interview	Solve timed problems and explain the approach aloud.
Portfolio	Publish a complete analysis with decisions and recommendations.
Reflection	Track weak concepts and revisit them deliberately.

Choose one track

SQL interview prep, Python/Pandas analysis, BI dashboards or visual storytelling.

Avoid

Starting five tracks at once and finishing none. Consistency beats platform hopping.

Weekly proof

Keep a public or private practice log with solved problems, mistakes, lessons and one mini-project.

4. 30-Day Practice Roadmap

The goal is to convert tutorials into independent problem solving. Adjust the number of questions to your schedule, but keep the sequence and reflection habit.

Week	Focus	Output
Week 1	SQLBolt or Kaggle Learn foundations.	Concept notes + beginner exercises.
Week 2	DataLemur easy SQL questions.	Solved queries + mistake journal.
Week 3	StrataScratch SQL/Python or a DataCamp track.	Timed practice + feedback notes.
Week 4	Mini analytics project.	Notebook/SQL file, visuals, insights and README.

Practice checklist

☐	I understand the question before coding
☐	I try before viewing hints
☐	I test edge cases and nulls
☐	I explain the solution in plain language
☐	I keep a mistake journal
☐	I revisit weak concepts
☐	I gradually increase difficulty
☐	I convert practice into a mini-project

StrataScratch	Open platform
DataLemur	Open platform
Kaggle Learn	Open platform
SQLBolt	Open platform
DataCamp	Open platform

Comment "PRACTICE"

Get links to all five platforms plus more SQL, Python and analytics practice resources.
